A **menu** is composed of a list **of menu items** to click on:

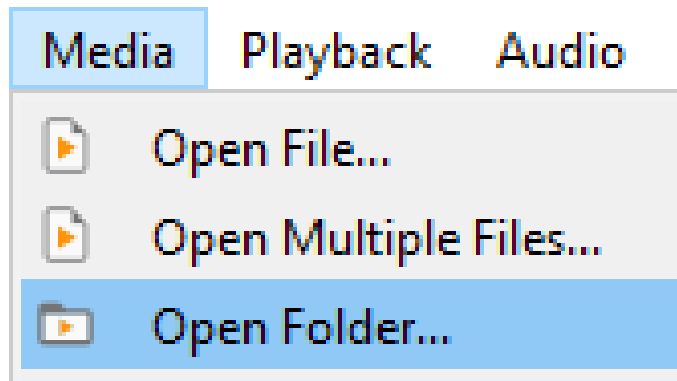

When we click on the menu item, a function is called (the **callBack**)

We want to present menu and menu item as follows:

Menu
name: string

many

MenuItem
name: string
callback: string

The function when user clicks on menu item

As example this menu can be expressed in JavaScript like this :

Media   Playback   Audio

▸ Open File...
▸ Open Multiple Files...
▸ Open Folder...

```
Let menuMedia = {
    name: "media",
    items: [
        { name: "OpenFile", callback: "onOpen" },
        { name: "OPenMutipleFile", callback: "onMultiple" },
        { name: "OpenFolder", callback: "onFolder" },
    ],
};
```
